HTML Practice Problems

Problem 1: Basic HTML Page

Create a webpage with:

- A title: "My First Web Page"
- A main heading containing your name.
- A paragraph introducing yourself.

Problem 2: Student Information

Create a webpage displaying:

- Student Name
- Student ID
- Department
- University Name

Requirements:

- Use different heading levels (h1 to h4).
- Add a short paragraph about your academic goals.

Problem 3: Text Formatting

Create a webpage that demonstrates the following HTML formatting tags:

- Bold
- Italic
- Underline
- Superscript
- Subscript

Example:

- H_2O
- $x^2 + y^2 = z^2$

Problem 4: My Favorite Book

Create a webpage containing:

- Book title as a heading.
- Author name.
- A summary paragraph (minimum 100 words).
- Highlight important words using formatting tags.

Problem 5: Daily Routine

Create a webpage describing your daily routine.

Requirements:

- Use at least 3 headings.
- Use 4 separate paragraphs.
- Include bold and italic text where appropriate.

Problem 6: Hyperlink Practice

Create a webpage containing links to:

1. AIUB official website.
2. Google.
3. YouTube.

Requirements:

- Each link should open in a new tab.
- Add descriptive text before each link.

Problem 7: Personal Portfolio Introduction

Create a simple portfolio page containing:

- Name
- Image
- Department
- Skills
- Career Objective

Requirements:

- Use headings and paragraphs only.
- Include one external link to your LinkedIn or GitHub profile.

Problem 8: Image Display

Create a webpage that:

- Displays your favorite animal image.
- Shows a heading above the image.
- Includes a short description below the image.

Requirements:

- Set image width to 300 pixels.

Problem 9: University Information Page

Create a webpage about your university.

Requirements:

- University name as a heading.
- Logo/image.
- Two paragraphs describing the university.
- A hyperlink to the university website.

Problem 10: Ordered List of Courses

Create a webpage containing an ordered list of your current semester courses.

Requirements:

- Minimum 8 courses.
- Use Roman numerals for numbering.

Example:
I. Web Technologies
II. Database Systems

Problem 11: Unordered List of Programming Languages

Create a webpage showing:

- Your favorite programming languages.

Requirements:

- Use square bullets.
- Include at least 10 programming languages.

Problem 12: Nested List – Academic Structure

Create a webpage showing the following hierarchy:

Faculty of Science & Technology
 ├— Computer Science
 | ├— Web Technologies
 | ├— Database Systems
 | └— Data Structures
 └— Electrical Engineering
 ├— Circuit Analysis
 ├— Electronics
 └— Power Systems

Requirements:

- Use nested unordered lists.

Problem 13: Shopping List

Create a shopping list using nested lists.

Example:

Groceries
- Rice
- Oil
- Vegetables

Electronics
- Mouse
- Keyboard
- Monitor

Requirements:

- Use both ordered and unordered lists.

Problem 14: Top 5 Tourist Places in Bangladesh

Create a webpage containing:

- A heading.
- An image of Bangladesh.
- An ordered list of the top 5 tourist places.
- A short description paragraph.

Example places:

- Cox's Bazar
- Sundarbans
- Saint Martin
- Sajek Valley

- Srimangal

Problem 15: Complete Student Profile Page

Create a complete HTML webpage containing:

1. Student Name and ID (Heading).
2. A personal introduction (Paragraph).
3. A profile picture.
4. A hyperlink to AIUB website.
5. An ordered list of completed courses.
6. An unordered list of technical skills.
7. A nested list showing:
    - Programming Languages
    - Web Technologies
    - Databases

Requirements:

- Use all HTML elements learned so far.
- Organize the page neatly with proper indentation.
